

Housing Data Analysis Dashboard

Problem Statement

The real estate industry generates large volumes of housing data, making manual analysis difficult and time-consuming.

This project develops an interactive Tableau dashboard to analyze housing sales. The dashboard enables users to understand sale prices, renovation impact, basement area, house age, and other important housing characteristics through interactive visualizations.

Objectives:

- Analyze housing sale prices.
- Study renovation impact.
- Explore basement area and house age.
- Support data-driven business decisions.
